

Tectova[®]

An innovative anti-slip coating,
aesthetic & sustainable.

Tectova®

Tectova® from ArcelorMittal Construction is a new anti-slip coating for our roofing products designed with safety and sustainability in mind.

up to
30
years warranty

It consists of pre-painted steel with a 60 µm two-layer polyurethane resin coating which gives it a matt, textured anti-slip surface.

This makes it easier for contractors working on the roof during installation or maintenance and reduces the risk of them slipping.

Safe and easy to install

The Tectova® coating offers an attractive, textured finish with excellent anti-slip properties to improve rooftop safety. It is also exceptionally scratch resistant ensuring that products are not damaged while on site or during installation.

Reaction to fire

Tectova® has achieved A1, the highest classification for reaction to fire.

Long lasting matt colour

As well as an attractive matt texture, the resin composition of Tectova® gives it long-lasting colour durability. It offers outstanding UV resistance (RUV4) and, with RC5 anticorrosion performance in line with EN10169 for coated steel, it will resist long term discolouration and corrosion regardless of the building's location. There is no risk of chalking, peeling or delamination on the edges either, so users can relax knowing that they will have a clean and stable surface for years to come.

Tectova® is covered by the ArcelorMittal Construction Smart Support warranty programme.

Other colors available upon request.

Eco-friendly and zero waste objectives

No carcinogenic substances are used in the manufacture and Tectova® achieves VOC emissions which are 200 times less than PVC and plastisol coatings (Certech estimate of VOC in line with ISO 16000-9).

ArcelorMittal's patented ZMevoLution® proprietary metallic coating ensures there is low lixiviation of zinc in the soil and there is no potentially damaging PVC content.

A key benefit of Tectova® is that its scratch resistant finish means there is no requirement for it to be supplied with a protective film. This helps us move towards our goal of 'zero waste' with no plastic waste to be disposed of.
